Can a 380V AC supply drop a 415V AC?

A 380V AC supply can drop as low as 357.2V AC within tolerance but the minimum assured voltage for correct performance of a 415V AC product is 373.5V AC. It may work perfectly well either way but it could be,technically,outside the specification of the equipment with obvious implications.

Why should you use 380 VDC?

Using 380 Vdc reduces the normal operating current by a factor of 7 compared to 48 Vdc - so reducing copper use per kW of load - and greatly increases the flexibility of site designs, with batteries no longer required to be close to the power converters, and the load able to be located 100s of meters away from the power system.

Why should you choose Eltek 380 VDC systems?

Eltek's 380 Vdc systems provide operators with the ability to solve the combined challenges of ever greater power density, varying load types, and increased site flexibility without compromising on performance, cost, or serviceability.
