What happens if a Bess reaches the end of its service life?

According to a common industry standard, a BESS is considered to have reached the end of its service life when its actual charging capacity falls below 80% of the original nominal capacity. The degradation of a BESS depends on two main factors:

What is the optimum temperature for a Bess?

A low self-discharge rate ensures higher round-trip efficiency. The optimum operating temperature for most BESS is around 20 degrees Celsius. However, they tolerate temperatures between 5 and 30 degrees Celsius. Some technologies are more tolerant of temperature variations than others.
