Are solar and battery storage a viable option for a mature home?

As much as these may sound like the considerations of a commercial fisherman, it's actually the menu of options available to energy mature homes that have invested in both solar and battery storage. According to a recent home energy framework from research firm Habitielligence, these homes are at CORE level 4 - Empowered.

Should you upgrade your home's energy system?

As households climb the ladder of energy maturity, though, more of the physical system upgrades are in the rear-view mirror, and the focus then shifts to the homeowners themselves as the orchestrators of energy efficiency and cost savings. What makes an empowered home a smart home?

At the highest level of energy maturity, empowered homes have professionally installed solar panels to generate their own power, an installed battery system to store energy for later use, and the hardware components to manage power movement back and forth from multiple sources, safely delivering it to the home.

Will home energy costs rise over the coming years?

Two interesting realities have a tendency to sweeten the pot for those who haven't yet done the mental gymnastics of considering home energy investments. One reality is that most people believe electricity costs will rise over the coming years -- 73% of homeowners, according to Habitielligence research.

Do all Level 4 households need a full suite of home energy components?

Not all level 4 households will need, want, or be in a financial position to support a full suite of home energy hardware components (e.g., smart panels, EV chargers), but having the ability to both generate and store power brings a degree of control and flexibility that most households would envy.
