What is the 2025 Solar Builder energy storage system Buyer's Guide?

The 2025 Solar Builder Energy Storage System Buyer's Guide is here to cut through the noise. This ESS Buyer's Guide is a comprehensive list of what each brand is offering in the residential and C&I space heading into 2025. We sent a questionnaire to every manufacturer to ascertain their top product and what components are included.

What should NREL consider when testing energy storage systems?

Photo by Owen Roberts, NREL Considerations for energy storage system testing include the following. If cost-justified by a large purchase, consider qualification testing of battery systems. Include test conditions in specifications for battery O&M diagnostics and testing.

Can a battery be paired with solar PV?

Energy management (control) systems become a critical element of system economics when a battery is paired with solar PV. There are a number of different energy management approaches that are applied to PV plus storage systems. The selection for a given context will depend on constraints based on system design and topology, markets, and costs.

Are PV storage systems safe?

Storage systems in PV plus storage settings call for many overlapping safety standards and precautions, particularly those that apply to working on DC wiring, and bring a set of technology-specific new considerations.

Which inverter is required for a combined PV and storage system?

Combined PV and storage system topologies will generally require a bi-directional inverter, either as the primary inverter solution (DC-coupled) or in addition to the unidirectional PV inverters (AC-coupled).

Why is energy availability important in assessing PV systems?

Both energy and availability are necessary metrics for assessing PV systems. If the stakeholders involved in a contract are most interested in energy production, and if the contract holds parties responsible for energy production, then it is crucial that energy losses associated with unavailability and system performance are accounted for.

Energy Storage Systems shall be listed to UL 9540 or successor standards and shall be certified by the California Energy Commission, except with program pre-approval.
