

System manufacturer

How many manufacturers and sellers of computer systems are there?

The following is a list of notable manufacturers and sellers of computer systems, both present and past. There are currently 426 companies in this incomplete list. ref (s).

What is a computer manufacturer?

As the demand for computers grew, more and more companies stepped in the business to manufacture computers and computer hardware and software. Some of these companies manufacture all computer parts and sell under their own brand, while others manufacture only some of the hardware and few others develop only software.

Where do I find a system manufacturer?

In the section to the right, the manufacturer is next to the System Manufacturer entry. While some OEMs (original equipment manufacturers) use proprietary hardware (e.g., Apple Silicon), many assemble their machines using parts manufactured by multiple companies.

Does a computer have different manufacturers?

Although a computer company puts everything together, individual components in a computer usually have different manufacturers. Many of the manufacturers of the hardware devices in your computer are in the same System Information screen mentioned earlier.

What types of computer products are made by computer manufacturing companies?

Computer manufacturing companies offer a wide range of products, including laptops, desktop computers, tablets, servers, workstations, and accessories such as keyboards, mice, and monitors. How can I choose the right computer brand for my needs?
